

Documentation for pdroff

@shrigma on github.com

1. Dependancies

Out of the box the TUI application will require:

- the sh shell
- zathura
- vim
- groff (using the ms macros)

Out of the box the GUI application will require:

- gtk
- zathura
- groff (using ms macros)

All configuration will be done through the source code.

2. General idea

The general idea of this application is to create a front end editor for groff documents. There are 2 applications Included in this repo, the terminal app that uses vim as the editor and the graphical app, the terminal app is a proof of concept, however its probably the more useful.
